FIJI
SKIN CLINIC

What was it that inspired Fiji Skin Clinic?

My background, qualifications and past 15 years' experience has been focused on health and wellbeing and helping clients look and feel better through Colonic Hydrotherapy and lifestyle changes. We have offered our clients colonics alongside a wide range of marketing leading beauty focussed treatments for quite some time now. Over the years and following many conversations with clients about their skin and body concerns, I could see that there was a demand for laser and IPL. These treatments provide my clients with a solution to their concerns and helps them achieve their aesthetic goals and feel confident in the skin they're in. This most certainly inspired us to become a dedicated skin clinic, now offering a wide range of IPL and laser treatments for both face & body.

What Lynton equipment do you use at your clinic?

We use the Lynton LUMINA® IPL and Laser system. Having become a dedicated skin clinic this felt like the right equipment to incorporate into our business due to its safe, effective and versatile nature. It gave us the perfect opportunity to provide our clients with a number of anti-ageing and skin resurfacing treatments that they require. With the added reassurance of Lynton being the UK's leading IPL & Laser company and preferred supplier to the NHS.

And are you happy with the clinical results you see?

We are relatively new to the LUMINA® system and its treatments but from the results we have seen so far, we are very pleased. We also offer our clients skin analysis and its truly amazing to see visible results in their before & after photos. On the surface the skin looks more even and flawless, but clients are fascinated to see the improvements in the deeper layers of skin shown from the skin analysis. Clients have reported that not only does their skin look so much younger and brighter, but it also feels so much smoother too! They feel really thrilled with initial results and are excited to see further improvements in their skin over the months following treatments as the tissue continues to repair and the skin stimulates more collagen and elastin.

Why did you choose Lynton as your aesthetic technology supplier?

I did plenty of research when it came to choosing a system. First and foremost, I wanted something safe to offer my clients with outstanding results. It's a big decision so I took my time and asked a number of industry professionals for their thoughts, advice and feedback. Lynton kept popping up in conversations which led me to contact them. Once I met the team, I could see they had a solid aftercare support, it definitely put my mind at ease. Lynton's reputation and excellence in British manufacturing combined with them being used by the NHS was definitely a common factor that appealed throughout my research. It soon became apparent that they were the UK's No. 1 IPL & Laser company within the industry and the laser of choice for my clinic.

What advice would you give to a clinic considering laser or IPL?

Lots of research and talk to those that have it. Talking to similar industry professionals about their experiences (good & bad) with laser or IPL can help you learn about the right route to take with your own clinic. Talking to clients is invaluable. Understanding what their concerns are and what their end-goals are is such an insight and shouldn't be overlooked.
