Every bride wants to look and feel gorgeous on her wedding day, but how far would you go to achieve this? More and more brides are now considering laser treatment in the lead-up to their wedding day to make sure they've flawless, glowing skin. **Lynton Lasers** explain why laser treatment is becoming the new craze...

Why brides might like to consider laser treatments

Laser treatments are a great and safe way to help remove and improve a number of skin concerns and issues that a bride may have leading up to her wedding day. With a variety of different laser treatments available, including hair removal and skin rejuvenation, Lynton Lasers holds the key to some of the most innovative and specialised treatments within the beauty industry.

They say you can't control the weather on your big day but equally you can't control your skin either. With stress from planning and excitement leading up to the day, you will potentially be lacking in sleep, eating the wrong foods and be slightly out of routine resulting in poor skin. Lynton Lasers have created their revolutionary laser technology, the ResurFACE to help with all the above skin concerns and to make sure you look rejuvenated on your big day. The Fractional Laser is a skin resurfacing tool that provides total rejuvenation to give the skin a smooth, youthful and glowing appearance – the words every bride loves to hear just before their wedding day.

What treatments are available

For this, the ResurFACE treatment by Lynton Lasers is the ultimate choice available from LaserLife Clinic and other clinics nationwide.

Who it works for

The ResurFACE treatment is suitable for most people and is highly recommended for individuals wanting a brighter, more even skin tone. It works towards smoother skin texture with improved skin elasticity, a reduction of wrinkles, reduced pore size and improvement to scars (including acne scars) and stretch marks.

How much it costs?

For a full face, prices start at £295 with courses receiving 33% discount at LaserLife Clinic. Other clinics may vary in cost.

What's involved

The laser works by targeting minute sections of the skin which penetrates into the tissue causing small columns of thermal damage which in turn stimulates significant collagen renewal. The surrounding non-affected areas of the skin aid the body's natural recovery process, allowing dramatic results without significant downtime but do be prepared for some slight redness post treatment.

How long do you need to need to leave before your wedding to have treatment done and settle?

Although you can see results from just one treatment, we recommend a course of between 4 and 6 treatments to see great, long lasting results that will continue well into your honeymoon. To make sure that your skin is fully healed, we would suggest you start your journey 6 months prior to your wedding, allowing plenty of time in between treatments. Lynton Lasers post treatment "power couple" of LIGHT SOOTHE and LIGHT PROTECT (SPF) is the best post-laser and IPL serum combination which will speed up the natural recovery of laser/IPL treated skin. The patented combination moisturises, removes irritation, cools and stimulates cell regeneration, whilst providing antibacterial protection. Containing a blend of vitamins, Manuka honey and hyaluronic acid, the combination will soothe and protect your skin instantly.
