**Fleckys**  
Tattoo

We are not just the brand of choice for aesthetic clinics, but also a number of highly successful tattoo studios. As part of our 25 Years Celebrational Tour, we visited the award-winning Fleckys Tattoo Studio in Golborne, Wigan.

### What is the story behind Fleckys Tattoo Studio?

"Our owner, Karl 'Flecky' Fletcher started tattooing in early 2000 and served his apprenticeship in one of the UK's most respected and leading tattoo studios. In 2009, Karl opened his own studio 'Flecky's', and from there we have grown from strength to strength. We have built a very strong reputation for quality and we have an average waiting time of 6-months".

### Why did you decide to invest in the LUMINETTE Q® tattoo removal laser?

"We are primarily a tattoo studio but we saw the opportunity to increase our revenue through introducing tattoo removal treatments. Rather than send someone elsewhere for treatment we decided to introduce the technology into the shop. We did actually have a tattoo removal laser from another brand before we decided to go with Lynton. It was not reliable and wasn't getting us the treatment results that reflect the quality of our business. That's why we invested in a Lynton product, that we knew would be safe and provide excellent results".

### And are you happy with the laser removal results you see?

"We use the lasers primarily for fade-downs so that our artists can create a better-quality tattoo. It is not always small tattoos that we need to fade down either, sometimes we are removing or fading a whole arm tattoo. Our customers are always really satisfied with the treatments as they can see the difference after only one treatment".

treatment. Those customers who may have had treatment elsewhere beforehand, and have experienced a lower-quality laser, are always the ones who are really surprised at the speed of removal".

### Why did you choose Lynton as your aesthetic technology supplier?

"We were aware of the Lynton brand and the credibility you have, through speaking to people in the industry and doing our own research. After a bad experience with another tattoo removal laser brand, we wanted to make sure we had a supplier that would not only supply equipment that would help us achieve good results, but that delivers high levels of training with the system. Training is important to ensure we are using the machine correctly and safely. I would definitely recommend Lynton".
