

MediZen

Dr Eccleston - Clinical Director

Dr David Eccleston specialises, and has over 18 years' experience, in the use of lasers, Botox® and many other injectable aesthetic procedures, having developed an interest in Cosmetic Dermatology during 1993. MediZen is one of the very few cosmetic clinics in the Midlands who have been registered with the Care Quality Commission and Save Face.

What was it that inspired your range of facial aesthetic clinic?

We consulted with Lynton after our growing demands of the Clinic required us to consider a second laser hair removal machine and further upgrading of our IPL machine. After a period of time researching at other industry led brands and looking at the clinical data, we decided that we would arrange a demonstration and trial period. We were very happy following the demonstration given, training, support, evidence and package that was offered to us.

Our decision to purchase 2 machines has seen us elevate the customer experience to be able to offer them the very best in results, service, and combination treatments.

What Lynton equipment do you use at your clinic?

The 3JUVE® skin rejuvenation machine.

And are you happy with the clinical results you see?

We have had our machine here at MediZen for over 2 years now and have experienced fantastic results. We have documented results initially by having trial patients and using our state of the art Visia/Vectra skin analysis machine to measure the skins improvement.

Why did you choose Lynton as your aesthetic technology supplier?

We believe in offering our patients the very best treatment experience and results. This has proved to have been a great choice, and being able to offer the best to our patient has always been at the forefront of our business.

What advice would you give to a clinic considering laser or IPL?

The support we have received has been fantastic, from general servicing of machines and being at the end of an email or telephone call to answer any queries. Training has always been updated by a clinical trainer coming into clinic to keep us up to date with clinical standards and training new employees over the years including refresher training. If you are considering Lynton, you are in good hands and I would encourage you to make that enquiry today.
