### What inspired Parkview Lasercare?

As a newcomer to aesthetics we were initially interested in hair and tattoo removal, but when we met with Lynton to discuss which systems were available, we were delighted to discover the fantastic rejuvenation treatments we could offer with the Luminette Advance.

### What Lynton equipment do you use at your clinic?

Along with the Luminette Advance we have a Luminette Q for tattoo removal. After speaking with the Lynton sales team it seemed that these two systems would be best suited to our business. We were very impressed with the knowledge of the sales team, and never felt pressured into getting a system that was out of our price range, the focus was always on what would best suit us as a start-up business.

### And are you happy with the laser removal results you see?

Absolutely! Over the last 4 years we have seen some very good results. Seeing my clients confidence grow throughout their course of treatments is invaluable. We have many clients who have been so impressed with their results that they go on to have further treatments. And of course, they tell their friends which can often lead to more referrals.

### Why did you choose Lynton as your aesthetic technology supplier?

The fact that Lynton are an award-winning British company used by the NHS appealed greatly, along with the research and development that has meant that Lynton have been leaders in the aesthetics field for so many years. We always wanted to be certain that our equipment was safe to use and after a lot of research decided that this was the company for us. We like the whole package offered from sales advice to training and then on to maintenance programmes and clinical support.

### What advice would you give to a clinic considering laser or IPL?

Do your research and ensure that you choose a credible company with safe, reliable machines. Speak to other clinic owners and hear what they have to say about equipment. The advice I had from other experienced clinic owners was invaluable.
