What was it that inspired your aesthetic clinic?

I am passionate about treatments that deliver real results and improve the condition of the skin. Plus, I find working in aesthetics is far more interesting than beauty, as you get to make real changes to people's lives. Over the years I have been able to improve many of my patients confidence who suffer with unwanted facial hair and blemishes on the skin.

What Lynton equipment do you use at your clinic?

We use the Lynton LUMINA[®] IPL and Laser system with 650, 650 Advance, 585 and Long Pulsed Nd:YAG Laser handpieces.

And are you happy with the clinical results you see?

I'm extremely happy with the clinical results I achieve with my LUMINA[®] system. It has allowed me over the years to build a reputation of being the local expert in hair removal and skincare. Especially when I have been able to treat patients who have been frustrated with previous failed attempts with laser treatments.

Why did you choose Lynton as your aesthetic technology supplier?

Being unsatisfied with two previous systems I chose very carefully and did a lot of research before my purchase with Lynton. I chose Lynton because they offer medical grade systems, are a supplier to the NHS and manufacture in the UK. Plus, the customer support and training Lynton provide was reassuring. I knew I was going to be in good hands.

What advice would you give to a clinic considering laser or IPL?

The advice I would give anyone considering purchasing a laser or IPL system is to do their research and choose a company like Lynton who produces systems to a medical level that deliver actual clinical results. You want to invest in a system that is safe and reliable, over the 8 years I have had my machine I have not had any issues with my system, it's a proper work horse for my business!
