

Amy Jayne Bowler: "I offer laser hair removal, laser tattoo removal and skin rejuvenation in a lovely little clinic in Rainham Kent. My experience of running my own business has been challenging yet so rewarding and the fact I am able to change people's lives and give people back their confidence makes it all worthwhile. My clients are always at the heart of my business and from the start I wanted to offer a comfortable yet professional environment. I've won several awards since being a laser specialist, the latest one being a gold award for aesthetics practitioner of the year award by the Kent Hair and Beauty Awards."

What was it that inspired Amy Jayne Aesthetics Ltd?

My son inspired me to open up my clinic. I took redundancy whilst on maternity leave and I used all of my redundancy to invest in my business. I wanted to start something where I could be flexible but still earn an income.

What Lynton equipment do you use at your clinic?

I currently have the Lynton LUMINA[®] Q-Switch machine alongside a Cryo Cooler. Having a Lynton LUMINA[®] machine means that I am confident in the services that I provide knowing that my clients will be happy with the final results.

And are you happy with the clinical results you see?

Absolutely, the results, reviews and recommendations speak for themselves. You totally get what you pay for! On average, people decide to book another body part once they see the results after just 3 sessions.

Why did you choose Lynton as your aesthetic technology supplier?

I researched for 6 months before deciding which machine to invest in. I spent time in a clinic in Toddington and I loved their machine, their results and also their feedback on Lynton as an organisation and the customer service. Lynton as a company have offered constant support since starting my business and pride themselves in customer service, as do I.

What advice would you give to a clinic considering laser or IPL?

I have actually helped 2 other clinics set up their business, they also use Lynton machines. It's an amazing industry to be a part of. People are constantly wanting treatments and once they see results it becomes addictive too! I absolutely love what I do which is ultimately helped by having one of the best machines out there.
