**Why did you choose Lynton as your aesthetic technology supplier?**

When I decided to set up my own skin clinic in Ireland, I was confident in choosing Lynton equipment. Picking a company that is well established and that has strong accreditations is very important. From previously working with Lynton in London I know their technology is medically certified, results from using their equipment was always excellent and their customer service has always been a positive experience.

The customer service, engineering maintenance and training is a 5-star service. Response from the Lynton team is always quick and helpful. The machine is easy to use, reliable and tidy for a clinic space. I would certainly recommend Lynton to any clinic owner.

**What made you decide on the 3JUVE?**

I set up a skin clinic within an already established Beauty & Laser Skin clinic in Ireland, who have used IPL and Diode lasers for 15+ years. 3JUVE appealed to me as it offers multiple treatment options in one piece of equipment, which is ideal for any skin clinic to broaden treatment options.

**Are you happy with the results you see in clinic?**

Without a doubt! Our 3JUVE is used frequently on a daily basis. We treat many skin concerns and conditions, from red veins and rosacea, pigmentation, skin laxity, acne and full rejuvenation. We tailor each skin care plan to each patient. 3JUVE is often used as a standalone treatment, although it also compliments some of the other skin treatments offered in our clinic.

Results from Lynton 3JUVE speak for themselves, even after one single session. We are delighted with the results we achieve for our patients with 3JUVE, but more importantly, so are our patients. We even have clients coming to our clinic because they know we use the Lynton 3JUVE.
