“At Dr Bejma Medical Clinic, we are on a mission to enhance our customers’ best features and deliver effective skin solutions with minimal disruption. The SmartXide Punto CO2 laser is our secret weapon, safely tackling everything from lines and wrinkles to pigmentation, scars, and more. The transformative outcomes we achieve with SmartXide are a testament to its awe-inspiring potential. Witnessing the resurgence of confidence in our patients is genuinely heartwarming and reinforces our commitment to clinical excellence.”

#weuselynton

What inspired the establishment of your Medical clinic and the diverse range of treatments it offers?

I founded the Dr Bejma Medical Clinic to enhance the lives of my clients and bring a diverse range of treatments. My goal is to enhance our patients best features through a tailored, artistic, balanced, and considered approach. Cosmetic treatment isn't about reversing the aging process; it's about promoting skin health and making it as best it can be.

I am a passionate advocate of cosmetic treatments and take a holistic approach with each of my patients, considering their needs and motivations before advising any course of treatment. I believe that to achieve the best results possible, the correct approach is to consider skin health and wellbeing, targeting skin concerns at the source to achieve youthful and glowing skin.

What factors influenced your decision to acquire the Smartxide Punto?

One of the most important responsibilities I have to my clients aside from providing safe, effective, and proven treatments, is to keep on top of the changes and advancements in the industry, I am always researching the best solutions available to my client's skin concerns so I can be sure we have the most effective solutions to offer. Traditional CO2 laser treatments, though hugely effective were considered a strong treatment that would often cause discomfort for the patient and could require long periods of downtime and the need for antibiotics to prevent infection. Lynton's SmartXide Punto does not hold this risk and patients can benefit from the treatment without the discomfort and prolonged downtime associated with traditional CO2.

How satisfied are you with the results achieved through the use of the Smartxide Punto?

The Smartxide Punto works on hard to treat areas, such as the periorbital region, and delivers outstanding results that patients can see instantly. When it comes to CO2 treatments, historically they have been known to be painful and associated with a lot of downtime. With Lynton's CoolPeel this is no longer an issue, the treatment is highly tolerable, and most patients can complete the treatment without a topical anaesthetic.

What were the key reasons behind selecting Lynton as your aesthetic technology supplier?

Lynton are the dream team and their technical support is outstanding. Their award-winning training, as well as their devices, are best in class and I can rely on them to address any queries in a speedy and efficient manner.

What advice do you have for clinics contemplating the purchase of a CO2 laser?

Transformative outcomes, award-winning training and reliable technical support are key elements to consider when purchasing a CO2 device. Lynton's expertise and reputation are invaluable to my clinic and I would have no hesitation in recommending them to other practitioners.
